registration or the compilation of vital statistics can be undertaken. It is difficult to see the reason for this positive assertion. It may be suggested that if the medical officer keeps up the statistics under a well thought of tabular statement on chart and notes whenever necessary or possible the special causes for any variations the same will be of the highest value from the point of view of the medical service and will serve as very useful indexes of the state of health in the state and the particular kind of ailments which prevail in different localities. If this information is available, even medical officers can be distributed more scientifically by posting men who are particularly qualified to cope with the kind of diseases which the area is generally subject to. The work if done in proper scientific manner will be a source of pleasure and will have highly educative value and would in any way interfere

Department of Public Health in Mysore.

No C.1046-2

Enc One

Office of the Sanitary Commissioner
with the Government of Mysore,

Bangalore, dated the 9th July 1927.

From

B. Mahomed Usmon, Esq., L.M. & S.,
Sanitary Commissioner with the Government of
His Highness the Maharaja of Mysore, Bangalore.

To

R. Ranga Rao, Esq., B.A.,B.L.,
General Secretary to the Government of
His Highness the Maharaja of Mysore, Bangalore.

Sir,

With reference to your letter No. G. 12304/San. dated the 21st May 1927, I have the honor to state that from the Representation (No. 17 made by the people of Sagar town) the purpose of each Municipality furnishing vital statistics to Hospitals is not clear. If the intention is to keep the Sub Assistant Surgeon informed of the health conditions in the towns, the procedure is commendable, but no work of either the registration or the compilation of vital statistics can be undertaken by the Medical Officer.

2. In regard to the delivery of health lectures in villages, circular instructions have already been issued whereby Medical Officers are required to avail themselves of the opportunity of their visits to interior villages to talk to the people about disease prevention and other health matters. A copy of the circular (issued under the approval of Government conveyed in your letter No.G9493/San. 42-26-3 dated the 1st March 1927) is herewith submitted for information.

I have the honor to be,

Sir,

Your most obedient servant

Usmon

For Sanitary Commissioner.

A.R.M.

A.Dis.6 dated 4th March 1927.

C I R C U L A R.

In consequence of the re-organisation of the Sanitary Department sanctioned in Government Order No.G.7223-43/San. 3-26-6 dated the 7th January 1927 and of the introduction of a new District Board and Village Panchayet Regulations, it is found necessary to issue a definite set of instructions for the regulation of the work which has to be pursued for the prevention of diseases and the promotion of health in local areas.

2. In this office circular No. C. 100-2 dated the 9th August 1923, it has been laid down as the duty of the local Medical Officer or Subordinate that he should not only render medical aid but also, on the preventive side, carry out inoculation - intra-venous injection or other approved measures - intended to afford personal protection against the prevalent disease. The responsibility for effective work in this line will continue to vest in the local Medical Officers.

3. This responsibility also extends to the field of general diseases which either exhibit a definite periodicity of recurrence or are engendered by changes in seasonal conditions, such as malaria, hook-worm, influenza &c. The local Medical Officers and Subordinates are hereby directed that in case of these diseases they should take the initiative themselves without waiting for the usual requisitions from the Revenue Department and visit the affected villages. They should see to it that continuous medical treatment is afforded to patients. Where, for instance Malaria is endemic or when a particular village happens to be badly affected with the disease for the first time it will be their duty to repeat the visit at short intervals until normal conditions are restored. The season between November and January every year is pronouncedly malarial or otherwise unhealthy in most areas and during this period systematic intineration should be undertaken so that all the important villages within their jurisdiction are visited and medical relief rendered. Such visits should be timed so as to interfere as little as possible with the dispensary work in the mornings. A report in the usual form should be submitted to the District Medical Officer whose duty it will be to issue from time to time, or in any particular case, such instructions as may be necessary to restrict aimless or otherwise excessive itineration.

4. The Medical Officer or Subordinate should during his visit to villages advise the Panchayets in matters of general Sanitation and enlist their activities in practical methods of ameliorating the existing insanitary conditions of villages. Health propogandistic work including short discourses to villagers on the causation and spread of diseases such as malaria, cholera, small-pox, hook-worm and plague, forms an important part of his duties during visits to villages. It would be possible in course of time to give Cinema Shows on these subjects.

5. The work under the scheme sanctioned in Government Order No. 2731-2/Edn. 10-9-10 dated the 20th September 1910 for the medical inspection of school children should receive more systematic attention. While the Medical Officer or Subordinate is not expected to conduct examinations in an elaborate manner he should not miss noting essential points in regard to the present health of the boy, his constitutional or other defects and generally all divergences from normal which call for special notice and treatment. With a views to introduce a uniform procedure for medical examinations, a set of simple forms, - including a progressive medical report for each student to be left with the teacher - will shortly be prescribed in consultation with the Inspector General of Education.

6. If he is a Member of the local Municipal Council, the Medical Officer or Subordinate should in that capacity take an

active interest in the maintenance of sanitary conditions in the local area. In the same manner that the District Medical Officer functions as the Sanitary Officer for the District, every Medical Officer or Subordinate stationed in a Taluk is under the guidance of the District Medical Officer - the Sanitary or Health Officer for the local area.

Office of the Sanitary Commissioner in Mysore, Bangalore.
